ELSEVIER

Comput. Methods Appl. Mech. Engrg. 151 (1998) 623–627

Computer methods in applied mechanics and engineering

Subject Index of Volume 151

Adaptive methods

Finite element simulation of the rolling and extrusion of multi-phase materials. Application to the rolling of prepared sugar cane, D.R.J. Owen, E.A. de Souza Neto, S.Y. Zhao, D. Perić and J.G. Loughran 479–495

Adaptive finite element techniques for frictional contact problems involving large elastic strains, P. Wriggers and O. Scherf 593–603

Boundary element methods

Development of BEM for thermoviscous flow, P.K. Banerjee and K.A. Honkala 43– 61

Dynamics

Simulation of impact involving an elastic rod, P. Shi 497–499

Dynamic plasticity models, R.E. Showalter and P. Shi 501–511

Finite element analysis and constitutive modelling of anisotropic nonlinear hyperelastic bodies with convected frames, H.C. Park and S.-K. Youn 605–618

Elasticity

Design optimization method for compliant mechanisms and material microstructure, N. Kikuchi, S. Nishiwaki, J.S.O. Fonseca and E.C.N. Silva 401–417

A numerical model of passive and active behavior of skeletal muscles, J.A.C. Martins, E.B. Pires, R. Salvado and P.B. Dinis 419–433

Simulation of impact involving an elastic rod, P. Shi 497–499

Finite element formulations for hyperelastic transversely isotropic biphasic soft tissues, E.S. Almeida and R.L. Spilker 513–538

An existence and uniqueness result in bone remodeling theory, J. Monnier and L. Trabucho 539–544

Adaptive finite element techniques for frictional contact problems involving large elastic strains, P. Wriggers and O. Scherf 593–603

Finite element analysis and constitutive modelling of anisotropic nonlinear hyperelastic bodies with convected frames, H.C. Park and S.-K. Youn 605–618

Finite difference methods

Sensitivity analysis for failure and damage in dynamically loaded tensile bars, A.K. Noor, A. Needleman and J.M. Peters 461–478

Finite element and matrix methods

A semi-explicit parallel solver for viscous incompressible flows, H.U. Akay, A. Ecer and K. Fekete 1– 12

Steady filtration problems with seawater intrusion: Variational analysis, G. Alduncin, J. Esquivel-Avila and L. Reyes-Avila 13– 25
On some recent adventures into improved finite element CFD methods for convective transport, A.J. Baker, J.S. Iannelli, S. Roy and D.J. Chaffin 27– 42
Shallow water theory and its application to the Venice lagoon, M.M. Cecchi and L. Salasnich 63– 74
Flowfield-dependent mixed explicit–implicit (FDMEI) methods for high and low speed and compressible and incompressible flows, K.T. Yoon, S.Y. Moon, S.A. Garcia, G.W. Heard and T.J. Chung 75–194
A Godunov-type finite volume method for the system of Shallow Water Equations, S. Chippada, C.N. Dawson, M.L. Martinez and M.F. Wheeler 105–129
Finite element solution of the Navier–Stokes equations for incompressible flow using a segregated algorithm, C.G. du Toit 131–141
Cross flow tensors and finite volume approximation with by deferred correction, M.G. Edwards 143–161
Refined two-dimensional models for the analysis of free boundary flows between parallel plates, A. Almeida, L. Faria and R. Febra 163–180
Distributed Lagrange multiplier methods for incompressible viscous flow around moving rigid bodies, R. Glowinski, T.W. Pan and J. Périaux 181–194
Bifurcation analysis of brown tide in tidal flow using finite element method, M. Kawahara and Y. Ding 195–213
Constructing wall laws with Domain Decomposition or asymptotic expansion techniques, Y. Achdou, P.Le. Tallec, F. Valentin and O. Pironneau 215–232
Derivation of stabilized equations for numerical solution of advective–diffusive transport and fluid flow problems, E. Oñate 233–265
3D computation of unsteady flow past a sphere with a parallel finite element method, V. Kalro and T. Tezduyar 267–276
Study of the behavior of thermal shield support system for the French plants, D.R. Bhandari, R.E. Schwirian, C. Yu, J.C. Matarazzo and N.R. Singleton 277–286
On solving nonlinear transient heat transfer problems with random parameters, T.D. Hien and M. Kleiber 287–299
Thermal analysis of the thermal protection system for the re-entry vehicle, K. Ohtake 301–310
Stability of explicit subcycling time integration with linear interpolation for first-order finite element semidiscretizations, P. Smolinski and Y.-S. Wu 311–324
Adiabatic shear bands in axisymmetric impact and penetration problems, R.C. Batra and J.B. Stevens 325–342
Eulerian finite element methods for the micromechanics of heterogeneous materials: Dynamic prioritization of material interfaces, D.J. Benson 343–360
A Voronoi cell finite element model for particle cracking in elastic–plastic composite materials, S. Moorthy and S. Ghosh 377–400
A numerical model of passive and active behavior of skeletal muscles, J.A.C. Martins, E.B. Pires, R. Salvado and P.B. Dinis 419–433
Sensitivity analysis for failure and damage in dynamically loaded tensile bars, A.K. Noor, A. Needleman and J.M. Peters 461–478
Finite element simulation of the rolling and extrusion of multi-phase materials. Application to the rolling of prepared sugar cane, D.R.J. Owen, E.A. de Souza Neto, S.Y. Zhao, D. Perić and J.G. Loughran 479–495
Finite element formulations for hyperelastic transversely isotropic biphasic soft tissues, E.S. Almeida and R.L. Spilker 513–538
Adaptive finite element techniques for frictional contact problems involving large elastic strains, P. Wriggers and O. Scherf 593–603

Fluid mechanics
Steady filtration problems with seawater intrusion: Variational analysis, G. Alduncin, J. Esquivel-Avila and L. Reyes-Avila 13–25
On some recent adventures into improved finite element CFD methods for convective transport, A.J. Baker, J.S. Iannelli, S. Roy and D.J. Chaffin 27–42
Development of BEM for thermoviscous flow, P.K. Banerjee and K.A. Honkala 43–61
Flowfield-dependent mixed explicit–implicit (FDMEI) methods for high and low speed and compressible and incompressible flows, K.T. Yoon, S.Y. Moon, S.A. Garcia, G.W. Heard and T.J. Chung 75–194
A Godunov-type finite volume method for the system of Shallow Water Equations, S. Chippada, C.N. Dawson, M.L. Martinez and M.F. Wheeler 105–129
Derivation of stabilized equations for numerical solution of advective–diffusive transport and fluid flow problems, E. Oñate 233–265

Fracture mechanics
Computational aspects of disturbed state constitutive models, C.S. Desai and W. Zhang 361–376
A Voronoi cell finite element model for particle cracking in elastic–plastic composite materials, S. Moorthy and S. Ghosh 377–400
Symmetric weak-form integral equation method for three-dimensional fracture analysis, S. Li, M.E. Mear and L. Xiao 435–459
Sensitivity analysis for failure and damage in dynamically loaded tensile bars, A.K. Noor, A. Needleman and J.M. Peters 461–478
Localized failure analysis in elastoplastic Cosserat continua, M.-M. Iordache and K. Willam 559–586
Constitutive modeling of damage accumulation and fracture in multiphase materials, M.P. Wnuk 587–591

Gas dynamics
On some recent adventures into improved finite element CFD methods for convective transport, A.J. Baker, J.S. Iannelli, S. Roy and D.J. Chaffin 27–42
Flowfield-dependent mixed explicit–implicit (FDMEI) methods for high and low speed and compressible and incompressible flows, K.T. Yoon, S.Y. Moon, S.A. Garcia, G.W. Heard and T.J. Chung 75–194
Constructing wall laws with Domain Decomposition or asymptotic expansion techniques, Y. Achdou, P.Le. Tallec, F. Valentin and O. Pironneau 215–232

Incompressible and near incompressible media
A semi-explicit parallel solver for viscous incompressible flows, H.U. Akay, A. Ecer and K. Fekete 1–12
Shallow water theory and its application to the Venice lagoon, M.M. Cecchi and L. Salasnich 63–74
Flowfield-dependent mixed explicit–implicit (FDMEI) methods for high and low speed and compressible and incompressible flows, K.T. Yoon, S.Y. Moon, S.A. Garcia, G.W. Heard and T.J. Chung 75–194
Finite element solution of the Navier–Stokes equations for incompressible flow using a segregated algorithm, C.G. du Toit 131–141
Refined two-dimensional models for the analysis of free boundary flows between parallel plates, A. Almeida, L. Faria and R. Febra 163–180
Distributed Lagrange multiplier methods for incompressible viscous flow around moving rigid bodies, R. Glowinski, T.W. Pan and J. Périaux 181–194
3D computation of unsteady flow past a sphere with a parallel finite element method, V. Kalro and T. Tezduyar 267–276

Nonlinear mechanics
Eulerian finite element methods for the micromechanics of heterogeneous materials: Dynamic prioritization of material interfaces, D.J. Benson 343–360
Computational aspects of disturbed state constitutive models, C.S. Desai and W. Zhang 361–376
Nonlinear modelling of hysteretic material laws by dual kriging and application, F. Trochu and P. Terriault 545–558

Numerical solution procedures
Sensitivity analysis for failure and damage in dynamically loaded tensile bars, A.K. Noor, A. Needleman and J.M. Peters 461–478
Finite element analysis and constitutive modelling of anisotropic nonlinear hyperelastic bodies with convected frames, H.C. Park and S.-K. Youn 605–618

Optimization
Design optimization method for compliant mechanisms and material microstructure, N. Kikuchi, S. Nishiwaki, J.S.O. Fonseca and E.C.N. Silva 401–417

Optimization and design of structures
Design optimization method for compliant mechanisms and material microstructure, N. Kikuchi, S. Nishiwaki, J.S.O. Fonseca and E.C.N. Silva 401–417

Plasticity
Adiabatic shear bands in axisymmetric impact and penetration problems, R.C. Batra and J.B. Stevens 325–342
Computational aspects of disturbed state constitutive models, C.S. Desai and W. Zhang 361–376
A Voronoi cell finite element model for particle cracking in elastic–plastic composite materials, S. Moorthy and S. Ghosh 377–400
Dynamic plasticity models, R.E. Showalter and P. Shi 501–511
Nonlinear modelling of hysteretic material laws by dual kriging and application, F. Trochu and P. Terriault 545–558
Localized failure analysis in elastoplastic Cosserat continua, M.-M. Iordache and K. Willam 559–586

Solutions of ordinary and partial differential equations
A Godunov-type finite volume method for the system of Shallow Water Equations, S. Chippada, C.N. Dawson, M.L. Martinez and M.F. Wheeler 105–129
Derivation of stabilized equations for numerical solution of advective–diffusive transport and fluid flow problems, E. Oñate 233–265
Stability of explicit subcycling time integration with linear interpolation for first-order finite element semidiscretizations, P. Smolinski and Y.-S. Wu 311–324
An existence and uniqueness result in bone remodeling theory, J. Monnier and L. Trabucho 539–544

Stability in fluid mechanics
Bifurcation analysis of brown tide in tidal flow using finite element method, M. Kawahara and Y. Ding 195–213

Stochastic processes
On solving nonlinear transient heat transfer problems with random parameters, T.D. Hien and M. Kleiber 287–299

Subsonic flow
Flowfield-dependent mixed explicit–implicit (FDMEI) methods for high and low speed and compressible and incompressible flows, K.T. Yoon, S.Y. Moon, S.A. Garcia, G.W. Heard and T.J. Chung 75–194

Supersonic flow
Flowfield-dependent mixed explicit–implicit (FDMEI) methods for high and low speed and compressible and incompressible flows, K.T. Yoon, S.Y. Moon, S.A. Garcia, G.W. Heard and T.J. Chung 75–194
Constructing wall laws with Domain Decomposition or asymptotic expansion techniques, Y. Achdou, P.Le. Tallec, F. Valentin and O. Pironneau 215–232
Thermal analysis of the thermal protection system for the re-entry vehicle, K. Ohtake 301–310

Thermal effects and thermodynamics
Development of BEM for thermoviscous flow, P.K. Banerjee and K.A. Honkala 43– 61
Constructing wall laws with Domain Decomposition or asymptotic expansion techniques, Y. Achdou, P.Le. Tallec, F. Valentin and O. Pironneau 215–232
Study of the behavior of thermal shield support system for the French plants, D.R. Bhandari, R.E. Schwirian, C. Yu, J.C. Matarazzo and N.R. Singleton 277–286
On solving nonlinear transient heat transfer problems with random parameters, T.D. Hien and M. Kleiber 287–299
Thermal analysis of the thermal protection system for the re-entry vehicle, K. Ohtake 301–310
Adiabatic shear bands in axisymmetric impact and penetration problems, R.C. Batra and J.B. Stevens 325–342

Transonic flow
Flowfield-dependent mixed explicit–implicit (FDMEI) methods for high and low speed and compressible and incompressible flows, K.T. Yoon, S.Y. Moon, S.A. Garcia, G.W. Heard and T.J. Chung 75–194

Transport phenomena
Cross flow tensors and finite volume approximation with by deferred correction, M.G. Edwards 143–161
Derivation of stabilized equations for numerical solution of advective–diffusive transport and fluid flow problems, E. Oñate 233–265

Viscoelastic and viscoplastic media
Adiabatic shear bands in axisymmetric impact and penetration problems, R.C. Batra and J.B. Stevens 325–342

Viscous flow
A semi-explicit parallel solver for viscous incompressible flows, H.U. Akay, A. Ecer and K. Fekete 1– 12
Development of BEM for thermoviscous flow, P.K. Banerjee and K.A. Honkala 43– 61
Finite element solution of the Navier–Stokes equations for incompressible flow using a segregated algorithm, C.G. du Toit 131–141
Refined two-dimensional models for the analysis of free boundary flows between parallel plates, A. Almeida, L. Faria and R. Febra 163–180

Wave motion
Simulation of impact involving an elastic rod, P. Shi 497–499
